Selçuklu / Konya

I was born in Konya in 1976. In 2000, I graduated from Moscow State University, Faculty of Computer Engineering. I went to Melbourne, Australia in 2001. There, I worked at different companies in IT and Product Management Departments at Senior Levels. I came back to Turkey in 2009. In 2010, I started to work as a Software Engineer at Mevlana University. When I left the university, I was the Assistant Manager IT. In 2019, I worked as an IT Manager at Konya Hospital. I have been managing my own projects as a Freelancer for a long time. Since 2022, I have been working as a Trainer and Project Manager at euroTechStudy.

Experience

2022 - Present / euroTechStudy - Germany

Instructor and Project Manager

I am currently working at euroTechStudy as a Senior Web Developer, Instructor, and Project Manager.

As part of the **Full Stack Web Developer training program**, we provide courses on **React, Node.js, Next.js, PHP, TypeScript, JavaScript, HTML, and CSS3.**

In addition to my role as an instructor, **I actively work as a senior-level software developer**, offering technical leadership to both colleagues and students. I provide hands-on guidance in areas such as project development, teamwork, code quality, and modern web technologies.

I also serve as the lead developer and project manager of one of the institution's most comprehensive initiatives, the **Campus Project**. I have taken full technical responsibility for this project—from software architecture to development processes—and I continue to actively manage and improve it.

2019 - 2020 / Konya Hospital - Konya, Türkiye

IT Manager

I worked as an IT Manager at Konya Hospital.

I managed the management of information processing processes and bridged the gap between the HIMS and the Hospital, and ensured that the requests were completed quickly and completely.

2016 - 2019 / Mercans - Konya, Türkiye

Freelancer

It was a great opportunity to develop my own projects. During this time, I had consultancy and software work for companies. I supported many companies in this field by doing Google and Facebook Advertising studies and Social Media Management.

2016 - 2017 / Mevlana University - Konya, Türkiye

Deputy Head of IT Department

I was responsible for all departments in Information Processing with the Deputy Head of the Information Technologies Department at Mevlana University. During this task, we contributed to the fundamental change in the structure of Information Processing and the specialization of Friends in Computing.

2014 - 2016 / Mevlana University Hospital - Konya, Türkiye

IT Manager

I worked as an IT manager at Mevlana University Hospital. We have successfully managed all the information processing responsibility and task with the friends we work with.

2010 - 2014 / Mevlana University - Konya, Türkiye

Software Specialist

I worked as a Software Specialist at Mevlana University. During this task, I managed the coordination and software development processes of our software team. During this time, we have added value to the University by developing many software.

2005 - 2009 / Willow Warehouse - Melbourne, Australia

Shift Shief

In the factory that produces plastic products, which I started as a worker, I worked as Team Leader, Zone Leader and Shift Shief, respectively. During this time, we carried out our duties

in the best way in coordination with about 50 of our friends.

Education

2000 / Moscow State University - Moscow

Computer Engineering

It was a very different world for me. We were like fish out of water, but we worked hard and we succeeded.

1994 / High School - Ankara

High School

What a Day I Miss You So Much. These are the days I miss the most in my life. We were happy in those days, we were crazy, we were crazy.

1990 / Atatürk Secondary School - Malatya

Middle School

Things are starting to improve :). I found myself. :)

1985 / Atatürk Primary School - Kütahya

Primary school

Unfortunately, it has been very difficult.

About Me

My journey in software development began during my first year at university, when I created my first project: a Turkish-Russian dictionary developed in Delphi back in 1996. Throughout my university years, I worked on dozens of projects, laying a solid foundation in the software world.

While living in Australia, I entered the IT sector quickly by completing my CISCO certification.

However, I had to shift to other industries for a period and stayed away from software development for some time. Upon returning to Turkey, I reopened the door to software and IT—and this marked the beginning of a golden era in my career.

PHP

I have developed countless projects with PHP—ranging from university registration systems to banking automation. Alongside my teammates, I contributed to dozens of successful projects. Even during my time in management, when I wasn't coding as much, programming remained a way for me to breathe, reflect, and recharge.

Unity3D

I started working with Unity3D upon a friend's recommendation. I developed several 2D and 3D games, some of which were published on the Google Play Store.

Flutter

Flutter has caught my interest in recent years. I developed several mobile applications, including a Sudoku game and a few apps focused on educational quiz solving.

Python

Python is one of the most prominent and enjoyable languages I use today—especially for AI and bot development.

Some of my notable projects include:

Buy/Sell bots for cryptocurrency trading,

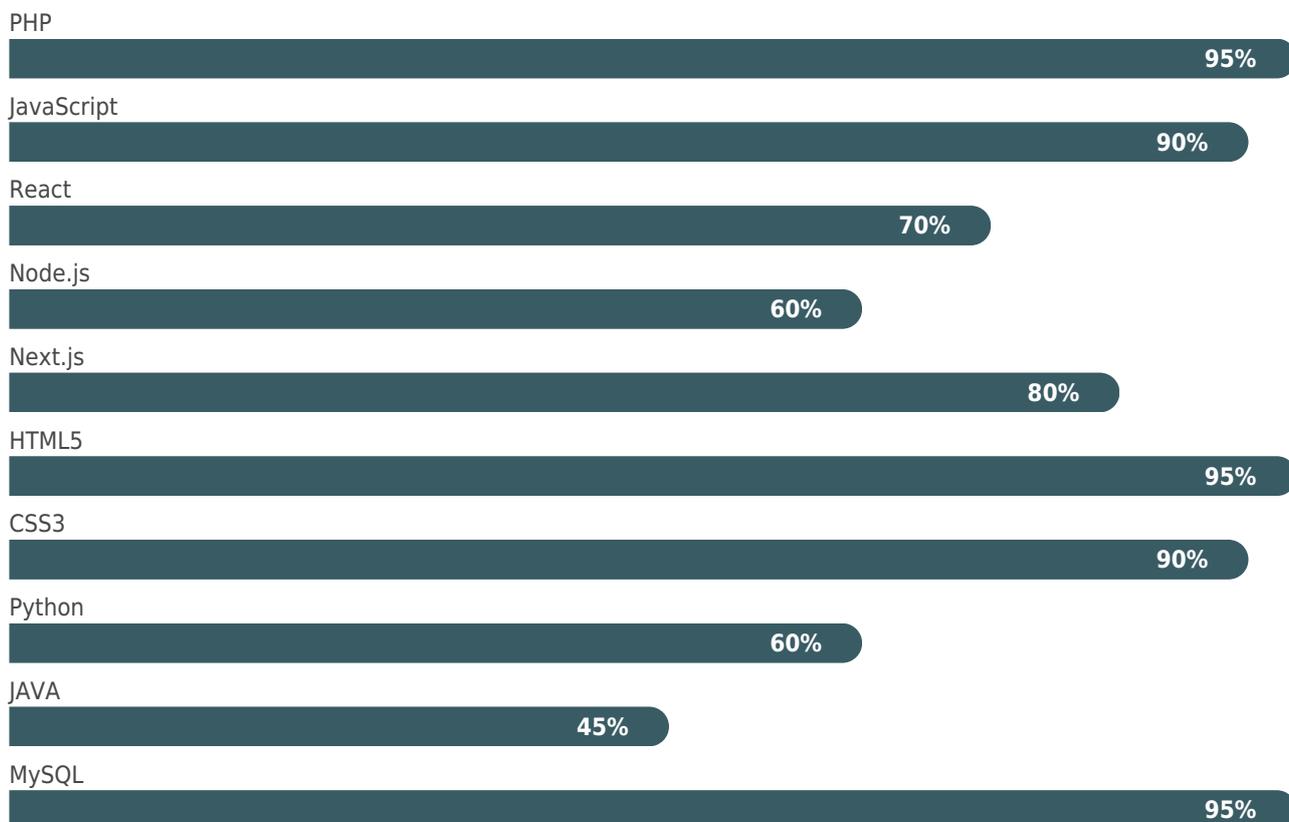

Telegram bots,

Fast indexing tools using the Google Indexing API that drastically reduce indexing time from months to days.

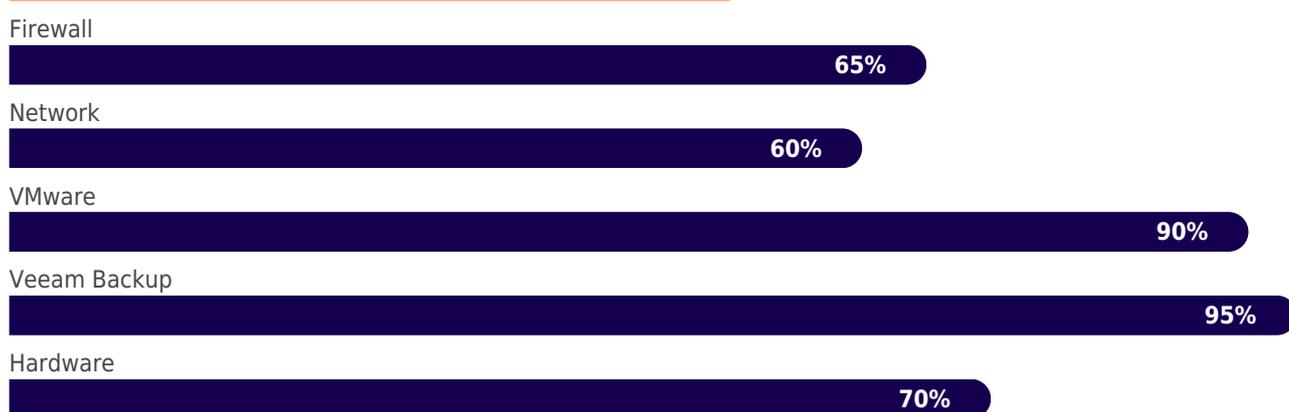

Web Development

I've built numerous web projects using PHP, JavaScript, HTML5, and CSS3. Web development is by far the area I enjoy the most. You can explore a selection of these projects in the portfolio section of my personal website.
